

# HTM226LF – Temperature and Humidity Module

- Full Lead free product
- Calibrated within +/-5% @55%RH at 5Vdc
- Small size and very cost effective
- Miniature connector (JST)
- 50kOhms +/-3% NTC temperature sensor @25°C

## DESCRIPTION

Based on the rugged HS24LF resistive humidity sensor, HTM226LF is a dedicated **humidity and temperature transducer** designed for OEM applications where a reliable and accurate measurement is needed. It features a very small size for easy, cost-effective mechanical mounting. Direct interface with a micro-controller is made possible with the module's linear **voltage output**.

## FEATURES

- The best combination of cost effectiveness and performance
- Stable, linear proportional voltage output from 0% to 95%RH
- Stable and reproducible characteristics with temperature
- High reliability and long term stability

## APPLICATIONS

- Air condition, Humidifier, Dehumidifier
- Humidity controller, Humidity transmitter
- Hygrometer, Hygro-recorder
- Copying machine
- Clock, Weather-forecast barometer

## PERFORMANCE SPECS

### MAXIMUM RATINGS

Ratings	Symbol	Value	Unit
Storage Temperature	Tstg	-20 to 80	°C
Storage Humidity	RHstg	0 to 100	% RH
Supply Voltage (Peak)	Vs	16	Vdc
Humidity Operating Range	RH	0 to 95	% RH
Temperature Operating Range	Ta	-20 to 60	°C

**Peak conditions:** less than 10% of the operating time.

# HTM226LF - Temperature and Humidity Module

## ELECTRICAL CHARACTERISTICS

(Ta=25°C, Vs=5Vdc +/-5%)

Humidity Characteristics	Symbol	Min	Typ	Max	Unit
Humidity Metrology Range	RH	20		85	%RH
Relative Humidity Accuracy (@25°C, 55%RH, Vcc= 5Vdc)	RH		+/-5		%RH
Supply Voltage	Vs	4.75	5.00	5.25	Vdc
Nominal Output @55%RH <sup>(1)</sup>	Vout	1650	1815	1980	mV
Current consumption	Ic		2	5	mA
Average Sensitivity from 33% to 75%RH	$\Delta V_{out}/\Delta RH$	30	33	35	mV/%RH
Temperature coefficient (10°C to 40°C)	T <sub>cc</sub>		-0.1		mV/°C

(Ta=25°C)

Temperature Characteristics	Symbol	Min	Typ	Max	Unit
Nominal Resistance @25°C	R	48.5	50.0	51.5	kΩ
Beta value: B25/85	β	3930	4050	4170	K
Temperature Measuring Range	Ta	-20		80	°C
Nominal Resistance Tolerance @25°C	R <sub>N</sub>		3		%
Beta Value Tolerance	β		3		%
Response Time	τ		10		s

## TYPICAL PERFORMANCE CURVES

### HUMIDITY SENSOR

- Modeled signal output

Vout = 33\*%RH (with Vout in mV and RH in %)

- Typical response look-up table

RH (%)	20	25	30	35	40	45	50
Vout (mV)	660	825	990	1155	1320	1485	1650
RH (%)	55	60	65	70	75	80	85
Vout (mV)	1815	1980	2145	2310	2475	2640	2805

### TEMPERATURE SENSOR

- Typical temperature output

Depending on the needed temperature measurement range and associated accuracy, we suggest two methods to access to the NTC resistance values.

$$R_T = R_N * e^{\beta \left( \frac{1}{T} - \frac{1}{T_N} \right)}$$

R <sub>T</sub>	NTC resistance in Ω at temperature T in K
R <sub>N</sub>	NTC resistance in Ω at rated temperature T in K
T, T <sub>N</sub>	Temperature in K
β	Beta value, material specific constant of NTC in K
e	Base of natural logarithm (e=2.71828)

## HTM226LF - Temperature and Humidity Module

① The actual characteristic of an NTC thermistor can, however, only be roughly by the exponential relation as the material parameter  $\beta$  in reality also depends on temperature. So this approach is suitable for describing a restricted range around the rated temperature or resistance with sufficient accuracy.

② For practical applications, a more precise description of the real R/T curve may be required. Either more complicated approaches (e.g. the Steinhart-Hart equation) are used or the resistance/temperature relation as given in tabulation form. The below table has been experimentally determined with utmost accuracy for temperature increments of 1 degree.

- Temperature look-up table

Temp (°C)	Rmin (kΩ)	Rtyp (kΩ)	Rmax (kΩ)
-20	442,536	488,511	538,776

## HTM226LF - Temperature and Humidity Module

### QUALIFICATION PROCESS

#### RESISTANCE TO PHYSICAL AND CHEMICAL STRESSES

- HTM226LF has passed through qualification processes of MEAS-FRANCE/HUMIREL including vibration, shock, storage, high temperature and humidity, ESD.
- Additional tests under harsh chemical conditions demonstrate good operation in presence of salt atmosphere, SO<sub>2</sub> (0.5%), H<sub>2</sub>S (0.5%), O<sub>3</sub>, NO<sub>x</sub>, NO, CO, CO<sub>2</sub>, Softener, Soap, Toluene, acids (H<sub>2</sub>SO<sub>4</sub>, HNO<sub>3</sub>, HCl), HMDS, Insecticide, Cigarette smoke. This is not an exhaustive list.
- HTM226LF is not light sensitive.

QUALIFICATION PROCESS				
Test Item	Test Description and Conditions	Criteria	Results	
Drop Test	The samples are subjected to drop test, 6 times per direction (18 drops total) from 1 meter height onto concrete surface	<u>Visual</u> : No degradation or physical damage should be observed	PASS	
Vibration Test	The samples are subjected to variable frequency from 20 to 2000Hz in line with JESD-22-B103-A		PASS	
Thermal Cycling	The samples are subjected to thermal cycles from -20°C to +85°C during 168 hours		PASS	
High Temperature Storage Test	The samples are stored at +85°C for 1000 hrs		PASS	
Low Temperature Storage Test	The samples are stored at -20°C for 1000 hrs		PASS	
High Humidity and High Temperature Life Test	The samples are subjected to storage at +45°C and 90%RH conditions for 1000 hrs		<u>Electrical</u> : The variation of humidity detection output shall be within +/-5 %RH deviation (final - initial measurement)	PASS
Low Humidity Storage Test	The samples are subjected to low humidity storage condition at 20%RH, 25°C for 1000 hrs			PASS
Continuous Operation Test	The samples are subjected to continuous operation test with electric load of AC 5V(1 kHz) at ambient conditions for 1000 hrs			PASS
Thermal Shocks	The samples are subjected to 100 thermal shocks (Air - Air) between -40°C and +105°C. Dwell time is 1 hour with transition time to extreme temperature <5sec			PASS
ESD	The samples are subjected to ESD at +/-8kV by direct contact and air discharge			PASS
